

# Wisemo Release Note

## Android Guest

### Build : 2018-072

## Release

Product:	Android Guest
Version:	17
Build:	2018-072
Shipping from:	29.03.2018
Release Type:	New build

## Introduction

This is a build update to version 17. It contains bug fixes and enhancements. Google Play now lists two WiseMo Guest modules. One is "WiseMo Guest (Old)", this is previous build 2017-159. The other is named "WiseMo Guest", this is the new build 2018-072. Eventually the old build will disappear. Only "WiseMo Guest" app build 2018-072 will be updated going forward. If you have Guest build 2017-159 installed, make sure to manually install the new Guest build.

## New features and enhancements

Changes made to support the Unicode 10 specification for naming – impacts particular how the Host ID field is handled, where it is now possible to use many more special characters, not just a-z. Combination of upper / lower case also possible.

## Bugs fixed

- It was not possible for Host user to initiate a Chat session with Guest.
- Auto-update of myCloud list of on-line Hosts would not work after WiFi errors or WiFi turn off / turn on.
- If connected to multiple Hosts simultaneously, the Guest would wrongly show the screen of the previous Host, when another was selected for viewing. Input was correctly passed to the Host selected for viewing.
- The details view did not show immediately, if item was selected in a list AND the device was rotated to horizontal, where details view should be visible. One had to reselect the item to get the details view.
- Localized devices could not remotely pass some language specific characters to the Host.
